CASH token prices on ICO:

How to participate

To purchase CASH tokens you will need to send ETH using smart contract. CASH tokens will be automatically send to your ETH wallet once your transaction will be confirmed.

How to configure your PC

To make sure all transfers are sent and received correctly we recommend to configure your PC the following way:

Browser:

[Google](#) ,

[Chrome](#)

Crypto wallet:

[My Ether Wallet](#)

You will be able to access the Ethereum address for token distribution on October 26, 2017 at 6:00 pm UTC time.

Please, make sure you read the text below before you send ETH

Please do not send the ETH prior the established date – August 26, 2017 at 9:00 pm Moscow time.

Any compatible crypto wallet can be used to purchase CASH tokens.

Compatible crypto wallet shall comply with following requirements:

- To be compatible with Ethereum and ERC-20;
- To be a web wallet.

You shall only use your own personal ETH account! Please note that if you use crypto exchange account to send ETH under smart contract your CASH tokens will charged to ETH exchange account. Thus, there is a great chance of losing CASH tokens without a refund.

There is a great variety of incompatible crypto wallets. Make sure you avoid using them to purchase CASH tokens! You may find some of them listed below:

- Any kind of Bitcoin exchange;
- Any kind of Ethereum exchange;
- Jaxx
- Exodus
- Coinbase
- Poloniex
- Kraken
- Bitstamp
- Bitfinex
- Bittrex
- Cex.io

CASH tokens restriction and exclusion information:

- CASH tokens are not for sale to US citizens.
- CASH tokens are ERC-20 compatible tokens in Ethereum block chain.
- CASH tokens are not refundable. The exchange transaction cannot be cancelled.
- CASH tokens may have no value and you may lose assets you used to purchase it.

Technical based risks

CASH token distribution is held in Ethereum network. Thus, you should be aware of the following:

1. The creation of blocks happens in a random period of time.

There is some time needed to create a block in Ethereum network which is determined by the protocol called “proof of work”. The creation of a block can happen in a random period of time. Therefore, you may fall out of CASH token distribution period if you make a transaction in the last moment.

You should be aware that Ethereum network may execute an exchange transaction out of time limits you expect.

2. Network overload

The Ethereum network can be exposed to a periodical overload. Once it happens some transactions can be delayed or even lost. Some users can intentionally influence Ethereum network stability to get an advantage in crypto tokens purchase. Please note that Ethereum block makers may exclude your transaction from a block or included it there in the period of time you don't expect. Such collisions are subject of Ethereum block chain network organization and cannot be blamed on CASH tokens smart contracts.

3. You shall fully control the account you use to send ETH for CASH token purchase.

CASH tokens will be credited to the ETH account used for a smart contract transaction. If you use an exchange service or account you do not control you will lose Cash tokens.
